

(Needs Golden Gate Bridge Letterhead)

November 1, 2010

Golden Gate Highway and Transportation District
301 The Presidio
San Francisco, CA 95629

Mr. John Lemmon, Chairperson
Region 6 700 MHz Regional Planning Committee
Senior Telecommunications Engineer, State of California
Office of the Chief Information Officer
Public Safety Communications Division
601 Sequoia Pacific Blvd
Sacramento, CA 95811-0231

Mr. Lemmon

Attached is an application from this agency for the use mobile/portable of the 700 MHz Low Power analog eligible channels throughout the Golden Gate Service Area. The Golden Gate Bridge Highway and Transportation District requests a letter of support from the region to file with this FCC 601 application as we anticipate utilizing these channels in the subscriber equipment associated with their new 700 MHz ACIS radio system in accordance with guidelines for the use of these channels located in Section 8.2 of the Region 6 700 MHz plan

Per the FCC's rules and the Region 6 guidelines, these channels are eligible to operate in the analog mode and can be utilized in either the simplex or duplex mode, which are limited to the transmit and receive capabilities of the subscriber equipment.

We thank Region 6 for their providing a letter of support to the District indicating that Golden Gate's use of the channels is consistent with use requirements as outlined in the Region 6 700 MHz plan.

Joe Perez
Communications Manager
Golden Gate Bridge Highway and Transportation District
